Declaration of Conformity for European Community (CE) Products

Note This information is provided for units with CE certification (see rating label on unit).

Manufacturer’s Name: MK Products, Inc.
16882 Armstrong Ave.
Irvine, CA 92606

Declares that the product: Cobra® MX, MX-HD
conforms to the following Directives and Standards:

Directives
Low Voltage Directive: 2006/95/EC

Standards
Torches And Guns For Arc Welding, EN 60974-7: 2005
SAFETY CONSIDERATIONS

ELECTRIC ARC WELDING EQUIPMENT

CAUTION: READ BEFORE ATTEMPTING INSTALLATION, OPERATION OR MAINTENANCE OF THIS EQUIPMENT

1-1 INTRODUCTION
This equipment is intended for ultimate application by commercial/industrial users and for operation by persons trained and experienced in the use and maintenance of welding equipment. Operation should not be undertaken without adequate training in the use of such equipment. Training is available from many public and private schools or similar facilities.

Safe practices in the installation, operation and maintenance of this equipment requires proper training in the art, a careful study of the information provided with the equipment, and the use of common sense. Rules for safe use are generally provided by suppliers of welding power sources, compressed gas suppliers, and electrode suppliers. Careful compliance with these rules will promote safe use of this equipment.

The following Safety Rules cover some of the more generally found situations. READ THEM CAREFULLY. In case of any doubt, obtain qualified help before proceeding.

1-2 GENERAL PRECAUTIONS
A. Burn Prevention
ELECTRIC ARC WELDING PRODUCES HIGH INTENSITY HEAT AND ULTRAVIOLET RADIANT ENERGY WHICH MAY CAUSE SERIOUS AND PERMANENT EYE DAMAGE AND WHICH MAY DAMAGE ANY EXPOSED SKIN AREAS.

Weart helmet with safety goggles or glasses with side shields underneath, appropriate filter lenses or plates (protected by clear cover glass). This is a must for welding or cutting (and clipping) to protect the eyes from radiant energy and flying metal. Replace cover glass when broken, pitted, or spattered.

Medical first aid and eye treatment. First aid facilities and a qualified first aid person should be available for each shift unless medical facilities are close by for immediate treatment of flash burns of the eyes and skin burns.

Weart protective clothing - leather (or asbestos) gauntlet gloves, hat, and high safety-toe shoes. Button shirt collar and pocket flaps, and wear cuffless trousers to avoid entry of sparks and slag.

Avoid oily or greasy clothing. A spark may ignite them.

Flammable hair preparations should not be used by persons intending to weld or cut.

Hot metal such as electrode stubs and work pieces should never be handled without gloves.

Ear plugs should be worn when working on overhead or in a confined space. A hard hat should be worn when others work overhead.

B. Toxic Fume Prevention
WARNING: The use of this product may result in exposure to chemicals known to the State of California to cause cancer and birth defects or other reproductive harm.

Adequate ventilation. Severe discomfort, illness or death can result from fumes, vapors, heat, or oxygen enrichment or depletion that welding (or cutting) may produce. Prevent them with adequate ventilation. NEVER ventilate with oxygen.

Lead-, cadmium-, zinc-, mercury-, beryllium-bearing and similar materials, when welded or cut, may produce harmful concentrations of toxic fumes. Adequate local exhaust ventilation must be used, or each person in the area, as well as the operator, must wear an air-supplied respirator. For beryllium, both must be used.

Metals coated with or containing materials that emit toxic fumes should not be heated unless coating is removed. Form the work surface, the area is well ventilated, or the operator wears an air-supplied respirator.

Adequate local exhaust ventilation must be used, or each person in the area, as well as the operator, must wear an air-supplied respirator.

Gas leaks in a confined space should be avoided. Leaked gas in large quantities can change oxygen concentration dangerously. Do not bring gas cylinders into a confined space.

Leaving confined space, shut OFF gas supply at source to prevent possible accumulation of gases in the space if downstream valves have been accidentally opened or left open. Check to be sure that the space is safe before reentering it.

Vapors from chlorinated solvents can be decomposed by the heat of the arc (or flame) to form PHOSGENE, a highly toxic gas, and chlorine and eye irritating products. The ultraviolet (radiant) energy of the arc can also decompose trichloroethylene and perchloroethylene vapors to form phosgene. DO NOT WELD or cut where solvent vapors can be drawn into the welding or cutting atmosphere or where the radiant energy can penetrate to atmospheres containing even minute amounts of trichloroethylene or perchloroethylene.

C. Fire and Explosion Prevention
Causes of fire and explosion are: combustibles reached by the arc, flame, flying sparks, hot slag, or heated material, misuse of compressed gases and cylinders, and short circuits.

BE AWARE THAT flying sparks or falling slag can pass through cracks, along pipes, through windows or doors, and through wall or floor openings, out of sight of the goggled operator. Sparks can fly many feet.

To prevent fires and explosion:
Keep equipment clean and operable, free of oil, grease, and (in electrical parts) metallic particles that can cause short circuits.

If combustibles are in area, do NOT weld or cut. Move the work if practicable, to an area free of combustibles. Avoid paint spray rooms, dip tanks, storage areas, ventilation ducts. If the work cannot be moved, move combustibles at least 35 feet away, out of reach of sparks and heat; or protect against ignition with suitable and snug-fitting, fire-resistant covers or shields.

Walls touching combustibles on opposite sides should not be welded on (or cut). Walls, ceilings, and floor near work should be protected by heat-resistant curtains, covers, or shields.

Fire watcher must be standing by with suitable fire extinguishing equipment during and for some time after welding or cutting it:
1. Appreciable combustibles (including building construction) are within 35 feet.
2. Appreciable combustibles are further than 35 feet, but can be ignited by sparks.
3. Openings (concealed or visible) in floors or walls within 35 feet may expose combustibles to sparks.

4. Combustibles adjacent to walls, ceilings, roofs, or metal partitions can be ignited by radiant or conducted heat.

Hot work permit should be obtained before operation to ensure supervisor’s approval that adequate precautions have been taken.

After work is done, check that area is free of sparks, glows, embers, and flames.

An empty container that held combustibles, or that can produce flammable or toxic vapors when heated, must never be welded on or cut, unless container has first been cleaned in accordance with industry standards.

This includes: a thorough steam or caustic cleaning (or a solvent of water washing, depending on the combustible’s solubility), followed by purging and inerting with nitrogen or carbon dioxide, and using protective equipment.

Water-filling just below working level may substitute for inerting.

A container with unknown contents should be cleaned (see paragraph above). Do NOT depend on sense of smell or sight to determine if it is safe to weld or cut.

Hollow casings or containers must be vented before welding or cutting. They can explode.

Explosive atmospheres. NEVER weld or cut where the air may contain flammable dust, gas, or liquid vapors (such as gasoline).

D. Compressed Gas Equipment
The safe handling of compressed gas equipment is detailed in numerous industry publications. The following
1. Pressure Regulators
Regulator relief valve is designed to protect only the regulator from overpressure; it is not intended to protect any downstream equipment. Provide such protection with one or more relief devices.

Never connect a regulator to a cylinder containing gas other than that for which the regulator was designed.

Remove faulty regulator from service immediately for repair (first close cylinder valve). The following symptoms indicate a faulty regulator:
- Leaks - if gas leaks externally.
- Excessive Creep - if delivery pressure continues to rise with downstream valve closed.
- Faulty Gauge - if gauge pointer does not move off stop pin when pressurized, nor returns to stop pin after pressure release.
- Repair. Do NOT attempt repair. Send faulty regulators for repair to manufacturer’s designated repair center, where special techniques and tools are used by trained personnel.

2. Cylinders
Cylinders must be handled carefully to prevent leaks and damage to their walls, valves, or safety devices:
- Avoid electrical circuit contact with cylinders including third rails, electrical wires, or welding circuits. They can produce short circuit arcs that may lead to a serious accident. (See 1-3C)
- ICC or DOT marking must be on each cylinder. It is an assurance of safety when the cylinder is properly handled.
- Identifying gas content. Use only cylinders with name of gas marked on them; do not rely on color to identify gas content. Notify supplier if unmarked. NEVER DEFACE or alter name, number, or other markings on a cylinder. It is illegal and hazardous.
- Empties: Keep valves closed, replace caps securely; mark MT; keep them separate from FULLS, and return promptly.
- Prohibited use. Never use a cylinder or its contents for other than its intended use, NEVER as a support or roller.
- Locate or secure cylinders so they cannot be knocked over.
- Passageways and work areas. Keep cylinders clear of areas where they may be stuck.
- Transporting cylinders. With a crane, use a secure support such as a platform or cradle. Do NOT lift cylinders off the ground by their valves or caps, or by chains, slings, or magnets.
- Do NOT expose cylinders to excessive heat, sparks, slag, and flame, etc. that may cause rupture. Do not allow contents to exceed 55 degrees C (130 degrees F.) Cool with water spray where such exposure exists.
- Protect cylinders, particularly valves from bumps, falls, falling objects, and weather. Replace caps securely when moving cylinders.
- Stuck valve. Do NOT use a hammer or wrench to open a cylinder valve that cannot be opened by hand. Notify your supplier.
- Mixing gases. NEVER try to mix any gases in a cylinder. NEVER refill any cylinder.
- Cylinder fittings should never be modified or exchanged.

3. Hose
- Prohibited use. Never use hose other than that designed for the specified gas. A general hose identification rule is: red for fuel gas, green for oxygen, and black for inert gases.
- Use ferrules or clamps designed for the hose (not ordinary wire or other substitute) as a binding to connect hoses to fittings.
- No copper tubing splices. Use only standard brass fittings to splice hose.
- Avoid long runs to prevent kinks and abuse. Suspend hose off ground to keep it from being run over, stepped on, or otherwise damaged.
- Protect hose from damage by sharp edges, and by sparks, slag, and open flame.
- Examine hose regularly for leaks, wear, and loose connections. Immerse pressured hose in water; bubbles indicate leaks.
- Repair leaky or worn hose by cutting area out and splicing. Do NOT use tape.

4. Proper Connections
- Clean cylinder valve outlet of impurities (may be identified by right hand threads for oxygen and left hand threads (with grooved hex on nut or shank) for fuel gas. Two wrenches to tighten adapter marked RIGHT and LEFT HAND threads.
- Regulator outlet (or hose) connections may be identified by right hand threads for oxygen and left hand threads (with grooved hex on nut or shank) for fuel gas.

5. Pressurizing Steps:
- Drain regulator of residual gas through suitable vent before opening cylinder (or manifold valve) by turning adjusting screw in (clockwise). Draining prevents excessive compression heat at high pressure seat by allowing seat to open on pressurization. Leave adjusting screw engaged slightly on single-stage regulators.
- Stand to side of regulator while opening cylinder valve.
- Open cylinder valve slowly so that regulator pressure increases slowly. When gauge is pressurized (gauge reaches regulator maximum) leave cylinder valve in following position: for oxygen and inert gases, open fully to seal stem against possible leak; for fuel gas, open to less than one turn to permit quick emergency shut-off.
- Use pressure charts (available from your supplier) for safe and efficient recommended pressure settings on regulators.
- For leaks on first pressurization and regularly thereafter. Brush with soap solution. Bubbles indicate leaks. Clean off soapy water after test; dried soap is combustible.

E. User Responsibilities
Follow all Safety Rules.
- Remove leaky or defective equipment from service immediately for repair. Read and follow user manual instructions.

F. Leaving Equipment Unattended
Close gas supply at source and drain gas.

G. Rope Staging-Support
Rope staging-support should not be used for welding or cutting operation; rope may burn.

1-3 ARC WELDING
Comply with precautions in 1-1, 1-2, and this section. Arc Welding, properly done, is a safe process, but a careless operator invites trouble. The equipment carries high currents at significant voltages. The arc is very bright and hot. Sparks fly, fumes rise, ultraviolet and infrared energy radiates, weldments are hot, and compressed gases may be used. The wise operator avoids unnecessary risks and protects himself and others from accidents.

A. Burn Protection
Comply with precautions in 1-2.
- The welding arc is intense and visibly bright. Its radiation can damage eyes, penetrate lightweight clothing, reflect from light-colored surfaces, and burn the skin and eyes. Skin burns resemble...
overload arc welding equipment. It may exceed equipment's rated capacity. Do not exceed equipment's rated capacity. Comply with precautions in 1-2C.

B. Toxic Fume Prevention

Ventilate work area. Carbon monoxide can kill. Before starting to weld, make sure that persons are wearing flash goggles. Others working in area. See that all pockets to prevent entry of sparks.

3. Protection of Nearby Personnel

Enclose the welding area. For production welding, a separate room or enclosed bay is best. In open areas, surround the operation with low-reflective, noncombustible screens or panels. Allow for free air circulation, particularly at floor level.

Viewing the weld. Provide face shields for all persons who will be looking directly at the weld. Others working in area. See that all persons are wearing flash goggles. Before starting to weld, make sure that screen flaps or bay doors are closed.

B. Toxic Fume Prevention

Comply with precautions in 1-2B.

Generator engine exhaust must be vented to the outside air. Carbon monoxide can kill.

C. Fire and Explosion Prevention

Comply with precautions in 1-2C.

Equipment's rated capacity. Do not overload arc welding equipment. It may overhear cables and cause a fire. Loose cable connections may overhear or flash and cause a fire.

Never strike an arc on a cylinder or other pressure vessel. It creates a brittle area that can cause a violent rupture or lead to such a rupture later under rough handling.

D. Compressed Gas Equipment

Comply with precautions in 1-2D.

E. Shock Prevention

Exposed electrically hot conductors or other bare metal in the welding circuit, or in ungrounded, electrically-HOT equipment can fatally shock a person whose body becomes a conductor. Do NOT TOUCH any electrically HOT part or grounded metal - reduces the body surface electrical resistance, enabling dangerous and possibly lethal currents to flow through the body.

To protect against shock:

Keep body and clothing dry. Never work in damp area without adequate insulation against electrical shock. Stay on a dry duckboard, or rubber mat when dampness or sweat cannot be avoided. Sweat, sea water, or moisture between body and an electrically HOT part - or grounded metal - reduces the body surface electrical resistance, enabling dangerous and possibly lethal currents to flow through the body.

1. Grounding the Equipment

When installing, connect the frames of each unit such as welding power source, control, work table, and water circulator to the building ground. Conductors must be adequate to carry ground currents safely. Equipment made electrically HOT by stray currents may shock, possibly fatally. Do NOT GROUND to electrical conduit, or to a pipe carrying ANY gas or a flammable liquid such as oil or fuel. Three-phase connection. Check phase requirement of equipment before installing. If only three-phase power is available, connect single-phase equipment to only two wires of the three-phase line. Do NOT connect the equipment ground lead to the third (live) wire, or the equipment will become electrically HOT - a dangerous condition that can shock, possibly fatally.

Before welding, check ground for continuity. Be sure conductors are touching bare metal of equipment frames at connections.

If a line cord with a ground lead is provided with the equipment for connection to a switch box, connect the ground lead to the grounded switch box. If a three-prong plug is added for connection to a grounded mating receptacle, the ground lead must be connected to the ground prong only. If the line cord comes with a three-prong plug, connect to a grounded mating receptacle. Never remove the ground prong from a plug, or use a plug with a broken ground prong.

2. Connectors

Fully insulated lock-type connectors should be used to join welding cable lengths.

3. Cables

Frequently inspect cables for wear, cracks, and damage. IMMEDIATELY REPLACE those with excessively worn or damaged insulation to avoid possibly lethal shock from bare cable. Cables with damaged areas may be taped to give resistance equivalent to original cable.

Keep cable dry, free of oil and grease, and protected from hot metal and sparks.

4. Terminals and Other Exposed Parts

Terminals and other exposed parts of electrical units should have insulating covers secured before operation.

5. Electrode Wire

Electrode wire becomes electrically HOT when the power switch of gas metal-arc welding equipment is ON and welding gun trigger is pressed. Keep hands and body clear of wire and other HOT parts.

6. Safety Devices

Safety devices such as interlocks and circuit breakers should not be disconnected or shut out. Before installation, inspection, or service of equipment, shut OFF all power, and remove line fuses (or lock or red-tag switches) to prevent accidental turning ON of power. Disconnect all cables from welding power source, and pull all 115 volts line-cord plugs.

Do not open power circuit or change polarity while welding. If, in an emergency, it must be disconnected, guard against shock burns or flash from switch arcing.

Leaving equipment unattended. Always shut OFF, and disconnect all power to equipment.

Power disconnect switch must be available near the welding power source.
Thank You

For selecting a quality product. We want you to take pride in operating this product...as much pride as we have in bringing the product to you!

Please Examine Carton and Equipment For Damage Immediately

When this equipment is shipped, title passes to the purchaser upon receipt by the carrier. Consequently, claims for material damaged in shipment must be made by the purchaser against the transportation company at the time the shipment is received.

Please record your equipment identification information below for future reference. This information can be found on your machine nameplate.

Model Name & Number _____________________
Code & Serial Number _____________________
Date of Purchase _____________________

Whenever you request replacements parts for, or information on this equipment always supply the information you have recorded above.

Read this Owner’s Manual completely before attempting to use this equipment. Save this manual and keep it handy for quick reference. Pay particular attention to the safety instructions we have provided for your protection.
Section A

Installation

Technical Specifications

Wire Capacity
.030" - .045" (0.6mm - 1.2mm) solid hard wire, and cored wire
.030" - 1/16" (0.8mm - 1.6mm) aluminum

Wire Speed
800 IPM (20.3 mpm) max

Duty Cycle - 100%
All ratings are using Argon gas
175 Amps/25 Volts Air Cooled, 1/4" Tip (Model 266, MX)
200 Amps/25 Volts Air Cooled, 3/8" Tip (Model 267, MX-HD)
225 Amps/25 Volts Water Cooled, 1/4" Tip (Model 262, MX)
250 Amps/25 Volts Water Cooled, 3/8" Tip (Model 263, MX-HD)

Support Equipment Required
- C.V. or C.C. power source of sufficient capacity for your needs.
- Regulated gas supply and hoses.
- Properly sized power leads from power source to wire feeder and ground.
- Water source and hose capable of providing a minimum of 1 quart (.95 liter) / min. at 45 p.s.i. when using water cooled guns.

Coolant Requirements
WARNING: Use only Cobra Coolant - failure to use coolant will void warranty.
Use Cobra Coolant (Aluminum Protection), which does not contain reactive sulphur or chlorine and does not react with copper, brass or aluminum. The Cobra Coolant is available in quantities of 1 gallon (P/N 931-0060), 5 gallon (P/N 931-0060-5GAL), or a case of 4 gallons each (P/N 931-0060-4).
The coolant flow rate should be a minimum of 10 GPH (1 qt/min) between 35 and 45psi. Contact the re-circulator manufacturer for specifications on pressure.

Gun Lead Connections
Power Cable - Air Cooled
A #2 power cable is used on the Cobra MX gooseneck gun. The gun end of the cable is stripped to the copper strands and wrapped with a copper strip. A setscrew holds the cable securely in the gun body with torque requirements of 55-60 in-lb. The cabinet end of the cable is equipped with a 1/2" ring lug which attaches to the top hole on the side of the power block. Supplied with this gun is a 3/8-16x5/8" bolt, a 3/8" spring lock washer and a 5/8" flat washer to attach the ring lug to the power block.

Power Cable - Water Cooled
Cobra MX water cooled gun utilizes a power/water cable with a #6 AWG cable inside a 5/16" diameter hose. The gun end is threaded into the gun body. These connections utilize a conductive sealant and are tightened with torque requirements of 100 ± 5 IN-LB.
Conduit
The Cobra MX gun comes standard with a poly-lined conduit, for feeding aluminum wire. The longer fitting with a shallow groove is used on the gun end. A set screw located on top of the gun handle secures the conduit in place.

Gas Hose
The gas hose is pushed over a barbed fitting on the end of the gun body and secured by twisting the hose retainer to the end of the hose (shown below). The hose retainer is re-usable and can be removed and re-installed as needed. The cabinet end of the gas hose uses our standard gas fitting (1/8” - 27 nps).

Water Hose
If so equipped; The gas hose is pushed over a barbed fitting on the end of the gun body and secured by twisting the hose retainer to the end of the hose. The hose retainer is re-usable and can be removed and re-installed as needed. The other end is connected to the center fitting on the power block.

Control Cable
A multi-conductor control cable is used on the Cobra MX gun. The gun end of the cable is secured with a cable clamp and the wires are connected to the potentiometer, the micro switch, the motor and the gun body mechanically. Slack is left in the electric cable as it exits the back of the gun to prevent cable and/or wire breakage. The cabinet end has a seven pin "W" clocked amphenol connector.

Section B
Operation
General
The Cobra MX gun maintains a constant, steady, uniform wire feed speed, regardless of curved or looped wire conduit. The constant push exerted by the slave motor in the cabinet, combined with the pull of the gun motor, causes the wire to literally float friction-free through the wire conduit. The 24VDC gun motor is controlled by a three and three-quarter (3 3/4) turn potentiometer in the gun handle.

Controls and Settings
Potentiometer
The laterally-positioned potentiometer is located in the lower end of the handle, providing up to 800 ipm with 3 3/4 turns.

Micro Switch
The micro switch assembly consists of the micro switch, and leads.

Trigger Sensitivity
The amount of trigger lever travel can be shortened for a quicker or more responsive action.

A more sensitive trigger lever is produced by reducing the gap between the trigger lever and the micro switch lever. By turning-in the trigger sensitivity adjustment screw, it closed the gap between the trigger lever and the micro switch lever.

This will enable the operator to increase the sensitivity of the trigger lever.
Sensitivity Adjustment
With the wire feeder turned on (with or without welding wire loaded), turn the screw in until the micro-switch is activated. Once activated, the gun and wire feeder motors will begin feeding wire. Retract the screw accordingly until the system is deactivated and adjusted to the operators’ liking.

Drive Roll and Idler Rolls
General
The Cobra MX gun comes standard with a knurled drive roll and a grooved idler roll, which will handle both hard wire and aluminum wire with diameters from .030 to 1/16 inch and steel from .030 to .045 inches. Optional insulated V-groove drive rolls are also available for aluminum wire if desired (see optional kits).

Drive roll tension is accomplished with a unique spring-loaded pressure screw. The Cobra MX comes from the factory with the pressure adjustment screw preset. **NO ADJUSTMENT IS REQUIRED FOR ALL SIZES AND TYPES OF WIRES.**

Drive Roll Installation/Removal
**Note:** Neither of the handles needs to be removed to access the drive or idler rolls.

1. Pull the cam lever away from the idler roll. This will relieve the pressure against the drive roll (as shown in Figure 1).

2. Align the drive roll removal tool (P/N 931-0100) over the flats of the drive roll (as shown in Figure 2). Hold the gun with one hand or on a table top, with the other hand give the removal tool a quick snap-turn in the **CLOCKWISE DIRECTION**.

3. Once the drive roll is loose, continue to spin drive roll in the clockwise direction to remove the drive roll from the gun.

4. Install a new drive roll on the left-hand threaded shaft. The drive roll will self-tighten when it is feeding wire.

Idler Roll Installation and Removal
(Reference Figure 3)

1. Using a slot type screwdriver, loosen idler screw, taking care not to lose lock washer under idler roll.

2. Insert new idler roll and lock washer onto screw, insuring that idler groove is toward top and lock washer is beneath.

3. Tighten.

**NOTE:** Lock washer must be under idler roll or it will not turn freely.
Section C

Accessories

A gas flow control mechanism (i.e. solenoid or valve) is required so the Cobra MX can be used on Cobra wire feeders. The following kits are available depending on the wire feeder used. The factory set times (in seconds) for normal and latched trigger functions is 0.5 pre-purge and 1.0 post-purge.

Gas/Trigger Control Kit, 115V ......................................................... 005-0713
Gas/Trigger Control Kit, 42V ......................................................... 005-0714

Optional Kits

Insulated Drive Roll Kits are used to prevent preheating of the aluminum wire which may soften it and clog the liner. This picking up of current at the drive rolls rather than at the contact tip is usually not a problem unless using too large of a contact tip or excessively oxidized aluminum wire.

Insulated Grooved Drive Roll Kit ...................................................... 005-0715
For .030" (0.8mm) dia. aluminum wire. Includes insulated groove drive roll and insulated idler roll assy.

Insulated Grooved Drive Roll Kit ...................................................... 005-0716
For .035" (0.9mm) dia. aluminum wire. Includes insulated groove drive roll and insulated idler roll assy.

Insulated Grooved Drive Roll Kit ...................................................... 005-0717
For .040" (1.0mm) dia. aluminum wire. Includes insulated groove drive roll and insulated idler roll assy.

Insulated Grooved Drive Roll Kit ...................................................... 005-0718
For 3/64" (1.2mm) dia. aluminum wire. Includes insulated groove drive roll and insulated idler roll assy.

Insulated Grooved Drive Roll Kit ...................................................... 005-0719
For 1/16" (1.6mm) dia. aluminum wire. Includes insulated groove drive roll and insulated idler roll assy.

Insulated Knurled Drive Roll Kit ...................................................... 005-0363
For .030" to 1/16" (0.8mm-1.6mm) dia. aluminum wire. Includes insulated knurled drive roll and insulated idler roll assy.

Handle Kit .......................................................................................... 005-0725
Includes left and right handles, screws and drive roll door.

Trigger Kit ......................................................................................... 005-0726
Trigger kit includes sensitivity adjustment screw replacement for all Cobra MX guns.

Micro Switch Kit ............................................................................... 003-2274
Replacement micro switch assembly for all Cobra MX guns.

Potentiometer Kit ............................................................................... 003-2190
Replacement potentiometer assembly for all Cobra MX guns.

Conduits

Flat spiral steel conduit for steel & cored wire.

615-0208 ......................................................................................... 15 ft./4.5m
615-0216 ......................................................................................... 25 ft./7.6m
615-0219 ......................................................................................... 35 ft./10.7m
615-0218 ......................................................................................... 50 ft./15.2m

Snake Skins

Snake Skin protective covers are now standard on all guns. You may order spare replacement covers to protect the lead assy of the gun when the factory one becomes damaged or worn. It can easily be replaced in the field by means of Velcro®.

Snake Skin Cover 13ft (for 15ft leads) ............................................. 931-0110
Snake Skin Cover 23ft (for 25ft leads) ............................................. 931-0122
Snake Skin Cover 33ft (for 35ft leads) ............................................. 931-0132
Snake Skin Cover 48ft (for 50ft leads) ............................................. 931-0123
Gas Valve Removal Tool
Gas valve removal is performed by using P/N 931-0105 Gas Valve Removal Tool. This multifunctional tool has been slotted on one side to encompass and conform to the gas valve stem and seat into the slotted gas valve body as seen in Figures 1 and 2. Removal of the gas valve can be accomplished by turning the gas valve tool counter clockwise. Reinstall by turning clockwise. The tool doubles as a bottle opener.

### Section D

**Maintenance**

**Periodic Maintenance**

Your Cobramatic system is designed to provide years of reliable service. Maintenance of the gun will normally consist of a general cleaning of the wire guide system, including barrels, drive rolls, and conduits at regular intervals. Remove spatter build-up from inside of nozzles with a hardwood stick.

The only parts on the Cobramatic system that are subject to normal wear are the conduit, contact tips, gas cups, front body liners, wire guides, drive and idler rolls. A supply of these parts should be maintained on hand.

The number of units in operation and the importance of minimal down time will determine to what extent spare parts should be stocked on hand. See the recommended spare parts list for the most commonly replaced parts.

If repairs do become necessary, qualified shop maintenance personnel can easily replace any part.

</table>
Troubleshooting Guide

Regardless of which gun or feeder used, all MK Products’ push-pull guns operate on the same principle. The slave motor in the feeder runs at a fast, constant speed, but has very low torque. It is always trying to feed more wire than the gun motor wants, and when the motor gets all it wants, it slows the slave motor, preventing a bird’s nest. Because of the low torque produced by the slave motor, a brake system is used to prevent wire overrun rather than tension. The drag adjustment in the feeder is used simply to keep the wire slightly taut, so it will not pull off the spool while feeding wire.

The high torque 24VDC gun motor is controlled by a solid state speed control located in the feeder, and a pot located in the gun. The gun motor, potentiometer, and micro switch are connected to the cabinet/control box via a control cable and Amphenol connector. If this cable becomes damaged, a variety of symptoms can occur, depending on which wire(s) break. To test, check each wire for continuity and shorts.

Remember, the micro switch in the gun activates both the slave motor and gun motor circuits in the cabinet. Therefore, if the slave motor and brake solenoid operate, but the gun does not, look more toward the gun motor’s 24 V circuits, speed control, control cable, or the gun motor. If nothing operates, look more toward the slave motor’s input, micro switch leads, or micro switch.

Testing The Gun

Reference the "W" clocked gun wiring diagram on the Cobra MX electrical diagram for information about pin-outs and locations.

Motor Check

Remove the gun connector from the cabinet.

Using the gun Amphenol connector, check the resistance across pins “A” and “B” (motor leads).

If an open circuit (more than \( K \) ohms) or short exist (less than \( 2 \) ohms) exists, check the motor leads and motor independently.

Testing the Potentiometer - “W” Clocked

Using the gun amphenol connector, check the resistance across pin “D” (wiper) and pin “C”. The resistance should vary from \( 0 - 5K \) ohms as the potentiometer is turned.

Check the resistance across pin “D” (wiper) and pin “G”. The resistance should vary from \( 5K - 0 \) ohms as the potentiometer is turned.

Testing the Micro Switch

Using the gun amphenol connector, check for continuity across pins “E” and “F” when the trigger is pressed.

LIMITED WARRANTY

Effective August 1, 2010

This warranty supersedes all previous MK Products warranties and is exclusive, with no other guarantees or warranties expressed or implied.

LIMITED WARRANTY - MK Products Inc., Irvine, California warrants that all new and unused equipment furnished by MK Products is free from defects in workmanship and material as of the time and place of delivery by MK Products. No warranty is made by MK Products with respect to trade accessories or other items manufactured by others. Such trade accessories and other items are sold subject to the warranties of their respective manufacturers, if any.

MK Products' warranty does not apply to components having normal useful life of less than one (1) year, such as relay points, wire conduit, tungsten, and welding gun parts that come in contact with the welding wire, including gas cups, gas cup insulators, and contact tips where failure does not result from defect in workmanship or material.

MK Products shall, exclusively remedy the limited warranty or any duties with respect to the quality of goods, based upon the following options:

(1) repair
(2) replacement
(3) where authorized in writing by MK Products, the reasonable cost of repair or replacement at our Irvine, California plant.

As a matter of general policy only, MK Products may honor an original user's warranty claims on warranted equipment in the event of failure resulting from a defect within the following periods from the date of delivery of equipment to the original user:

1. Power Supplies and Wire Feed Cabinets .................. 3 years
2. Weldheads, Coolers, Positioners, and Push-Pull Guns ....1 year
3. Spool Guns, and Spool Gun Modules ................. 180 days
4. Repairs/Exchanges/Parts .................................. 90 days

Classification of any item into the foregoing categories shall be at sole discretion of MK Products. Notification of any failure must be made in writing within 30 days of such failure.

A copy of the invoice showing the date of sale must accompany products returned for warranty repair or replacement.

All equipment returned to MK Products for service must be properly packed to guard against damage from shipping. MK Products is not responsible for any damages resulting from shipping.

Normal surface transportation charges (one way) for products returning for warranty repair or replacement will be borne by MK Products, except for products sold to foreign markets.

ANY EXPRESS WARRANTY NOT PROVIDED HEREIN AND ANY IMPLIED WARRANTY, GUARANTY, OR REPRESENTATION AS TO PERFORMANCE AND ANY REMEDY FOR BREACH OF CONTRACT WHICH, BUT FOR THIS PROVISION, MIGHT ARISE BY IMPLICATION, OPERATION OF LAW, CUSTOM OF TRADE, OR COURSE OF DEALING, INCLUDING ANY IMPLIED WARRANTY OF MERCHANTABILITY OR OF FITNESS FOR PARTICULAR PURPOSE, WITH RESPECT TO ANY AND ALL EQUIPMENT FURNISHED BY MK PRODUCTS, IS EXCLUDED AND DISCLAIMED BY MK PRODUCTS EXCEPT AS EXPRESSLY PROVIDED BY MK PRODUCTS IN WRITING.

MK's PRODUCTS ARE INTENDED FOR ULTIMATE PURCHASE BY COMMERCIAL/INDUSTRIAL USERS AND FOR OPERATION BY PERSONS TRAINED AND EXPERIENCED IN THE USE AND MAINTENANCE OF WELDING EQUIPMENT AND NOT FOR CONSUMERS OR CONSUMER USE. MK PRODUCTS' WARRANTIES DO NOT EXTEND TO, AND RESELLER IS AUTHORIZED TO EXTEND MK PRODUCTS' WARRANTY TO ANY CONSUMER.

USE OF OTHER THAN GENUINE MK PRODUCTS' CONSUMABLES, PARTS, AND ACCESSORIES MAY INVALIDATE YOUR PRODUCT WARRANTY.
